

New Product Release

The NHeO dive computer

The new NHeO dive computer is designed to provide the most streamlined, user-friendly interface of any mixed gas computer!

The faster, more intuitive, screen navigation process and gas selection system make programming and diving the NHeO simple.

While using the NHeO is simple, rest assured, this computer does what you need it to do, and is full of features:

The NHeO right out of the box is ready for all your Open Circuit Air and Nitrox Diving. Program in up to 4 gasses and hit the water with confidence. The multi-profile, multi-gas algorithm has full decompression look-ahead and the reliability that you have come to trust from VR Technology. You can also switch or add gasses underwater at any time and the NHeO calculates your new profile.

The combinations are unlimited!

If Trimix diving is in your future, simply enter a PIN and the NHeO is instantly transformed into a full Air/Nitrox/Trimix computer. You can also upgrade from Single Colour to Multi Colour.

To wet your appetite, we have included a three dive Multi Colour trial on all NHeO's purchased this month.

Other features include:

Gauge mode as standard.

User changeable (AA) battery.

Outstanding screen visibility via a backlit screen.

PC link option (Factory Upgrade)

Prices (RRP)

Air/Nitrox £550

Air/Nitrox/Trimix £605

Air/Nitrox to Trimix Upgrade £75
